PARTNERS

## About US

"Education is no longer about just teaching students alone, but to also develop for them a reliable compass and the navigation tools for them to find their own way in a world that is increasingly competitive, complex, volatile and uncertain"

Rwanda Education Future Lab is a social driven company with the aim to build a successful foundation, in use of ICT by introducing robotics and programming at an early age. Our business model is based on finding solutions to the following questions:

- How can we prepare students for jobs that have not yet been created, to tackle societal challenges that we cannot yet imagine, and to create and use technologies that have not yet been invented?
- How can we equip them to thrive in an interconnected world where they need to understand and appreciate different perspectives and worldviews, interact respectfully with others, and take responsible action toward sustainability and collective well-being?

In response to the above questions, the Rwanda Education Future Lab has established a learning center called "Keza Learning Compass" which will be the main center of learning. However, to support the rural areas, a mobile lab will be introduced.

## Objective of Grand Opening

- Share with the public the activities of the Rwanda Education Future Lab and the preliminary findings from the pilot,
- Launch Keza Learning Compass
- Launch the first homemade robots
